5 Questions   31 Point

### Section 1: Basic

Answer all questions in this section. Each question is worth 5 Points.

Multiple Choice   5 Point

What is the primary purpose of data normalization in database design?

- ☐ To eliminate data redundancy and improve data integrity
- ☐ To increase storage efficiency by compressing data
- ☐ To encrypt sensitive data for security purpose
- ☒ To optimize query performance by deformalizing tables

Multiple Choice   5 Point

What is the primary purpose of data normalization in database design?

- ☐ To eliminate data redundancy and improve data integrity
- ☒ To increase storage efficiency by compressing data
- ☐ To encrypt sensitive data for security purpose
- ☐ To optimize query performance by deformalizing tables

### Section 2: Fundamental

This section contains Questions you are required to provide short answer to.

Short Answer   8 Point

Define the concept of polymorphism in object programming and provide brief example.

Students will provide a short text response (1 - 3 sentences)

Short Answer   8 Point

Define the concept of polymorphism in object programming and provide brief example.

Students will provide a short text response (1 - 3 sentences)

### Section 3: Advanced Topics

This section contains more complex questions. Each question is worth 15 points.

Short Answer   8 Point

Analyze the advantage and disadvantages of micro service architecture compared to monolithic architecture. Include consideration for scalability, maintenance, and deployment.

Students will provide a detailed response (250-500 words)

Correct

Probability

Question 1

Correct

A fair coin is tossed three times. What is the probability of getting exactly two heads?

Student's Answer

The Probability is 3/8 Or 0.375. This can be calculated using the binomial probability formula: C(3,2) \* (1/2)

Correct Answer

3/8 or 0.375

Question 2

Correct

A fair coin is tossed three times. What is the probability of getting exactly two heads?

Student's Answer

The Probability is 3/8 Or 0.375. This can be calculated using the binomial probability formula: C(3,2) \* (1/2)

Correct Answer

3/8 or 0.375

## Secure AI-Powered Online Assessment

Create, proctor and grade tests in minutes with built-in plagiarism checks and a distraction-free environment

Get started now

Trusted by over 5200 users.

### Why Choose us?

#### AI Instant Grading

Auto score objective and short answer questions for immediate feedback.

#### Plagiarism Detection

Detect similarity checks, flag copied content before you grade.

#### Secure Test Mode

Full Screen enforcement, copy/paste checks, and tab switch alerts.

### How it works

#### Design Your Test

Choose Question type, timing and security settings in one screen.

#### Share and Proctor

Send a secure link to students to test online and get instant insight into their work.

#### Review Result

View scores, AI feedback, and integrate report instantly.

### Why Educators Trust SOAFT

#### Custom Rubrics

Define Criteria and let AI suggest scores.

#### Analytics Dashboard

Track class performance and question difficulty.

#### Anytime & Anywhere Access

Access your assessment and review result from any device.

#### Edu-Tech integration

SOAFT gives you a unified workflow and data flow across entire stack.

### Transparent Pricing for all
